Summary

Full-stack engineer with 8 years of experience in payments, Web3 and AI products, from architecture to production. Built NestJS and PostgreSQL backends handling 500+ RPS, grew products in an ecosystem of 6M+ users and a Telegram game with 967K sign-ups in 100 days, and integrated government and payment systems. I work with AI coding agents (Cursor, Claude Code, Codex) and review every decision myself.

Experience

SODA.AI — Senior Backend Engineer

Dec 2023 — Present

AI game generation platform for Telegram Mini Apps on TON and Solana, plus adjacent products: a gaming goods marketplace and B2B integrations with government systems. Team of 8; owned the backend architecture.

- Designed a NestJS microservices platform serving 500+ RPS and 2,000+ concurrent games; set up Kubernetes autoscaling on application metrics.
- Built the LLM game generation pipeline: a two-stage flow (analyze and plan changes → apply them to the code), WebSocket streaming, game versions in S3 with rollback, payments in Telegram Stars.
- Built the backend of a no-code Solana mini-game builder solo in 5 months: Anchor program indexer, candles in 9 timeframes and a TradingView-compatible charting API.
- Optimized storage and analytics for 100M+ game and trading event records in TimescaleDB.
- Became the main author of a TON launchpad backend: blockchain scanner with failover across 3 RPC providers, automatic token listing on DeDust after a sale, CI/CD to DigitalOcean for 4 environments.
- Led the frontend of a gaming goods marketplace on Next.js 16 and React 19 from the first commit to production on 6 domains; as release engineer, merged 1,000+ changes in a team of 7 developers.
- Reconciled 1,085 paid marketplace orders ($15.3K in 3 weeks) against web analytics, found that 56% of purchases went untracked and designed server-side event delivery.
- Integrated a marketplace seller's back office with the government product labeling system and e-document exchange: code ordering, withdrawal from circulation for FBS orders, invoice reconciliation; 75K codes in production.

Stack: NestJS, TypeScript, PostgreSQL, TimescaleDB, Redis, Kubernetes, Docker, Next.js, React, Solana, TON, OpenAI / Anthropic / Gemini API, GitHub Actions, GitLab CI, DigitalOcean, OpenTelemetry, Sentry

DeLab — Senior Full Stack Engineer

Oct 2022 — Nov 2023

Web3 studio: a TON product ecosystem in Telegram (wallet, VPN, eSIM, donations, games) and partner projects. Team of about 10; assigned tasks and ran code reviews.

- Laid out the architecture of DeWallet, a non-custodial TON wallet as a Chrome extension and Telegram Mini App: client-side AES encryption of the mnemonic, TonConnect bridge; listed in the official TON wallets-list, ecosystem of 6M+ users.
- Wrote the DeVPN backend alone in 3 weeks: Outline server fleet management, Telegram initData auth, payments in TON and 10 jettons with automatic subscription activation.
- Owned payouts for a Telegram game with its own token: 967K sign-ups in 100 days, peak of 103K per day, $71K paid out in batches via BullMQ.
- Built TON payment intake: a block indexer with a persistent cursor, auto-sweep to a hot wallet and a withdrawal worker, plus TonAPI scanners reused in the VPN, eSIM service and games.
- For partners, built the blockchain layer of the Libermall NFT marketplace (Tegro) with a port of 5 Getgems contracts, and the frontend of the on-chain game Crazy Portals on Everscale and Venom.

- Main author of the npm library @delab-team/ton-network-react for calling and deploying TON contracts from the browser via TonConnect.

Stack: TypeScript, Node.js, Express, React, PostgreSQL, Redis, BullMQ, Python (FastAPI), TON (TonConnect, blueprint, FunC contract integration), Everscale, Venom, IPFS

Polus — Middle Backend Engineer Jul 2021 — Sep 2022

DeFi projects on TON and EVM: DEX, crypto payment gateway, wallet, mining pool, NFT marketplace.

- Built the trading interface of the first order-book DEX on TON (BiTON) with an order book and charts; the platform handled 200+ RPS with sub-second latency.
- Built the Polus Pay checkout: payment with any of 12 tokens across 3 EVM networks in a single transaction via Uniswap V3.
- Sole author of the merchant dashboard (webhooks, API keys, domain verification) and a browser EVM wallet for 3 networks.
- Built a TON → USDC cross-chain exchange on Polygon: TON block scanner and payouts through a custom Solidity contract with EIP-1559 gas pricing.
- Wrote the TON mining pool backend: PoW task distribution, result accounting, payouts, GPU miner adaptation in C++ / OpenCL; monitoring of 30,000+ devices with telemetry and alerts.

Stack: Node.js, TypeScript, React, Vue / Nuxt, ethers.js, wagmi, Uniswap SDK, Solidity, TON, C++ / OpenCL, Docker, GitHub Actions

Cyber Donate — Middle Full Stack Engineer Sep 2018 — Jun 2021

Payment and donation services, apps for VK Mini Apps.

- Built a donation and payment service: PHP backend with a WebSocket server and QIWI, Python REST API, an embeddable JS SDK for the checkout window; about 5K users.
- Launched CryptoM, a VK mining game: 194K users, 5.8K payments and 2.6K payouts via QIWI.
- Shipped 20+ VK Mini Apps on React and VKUI.

Stack: JavaScript, React, VKUI, PHP, Python (Flask), MySQL, Redis, Docker, GitLab CI

Skills

- **Backend:** Node.js, NestJS, TypeScript, Express, PostgreSQL, TimescaleDB, Redis, BullMQ, WebSocket / Socket.IO, REST, Swagger, Python (FastAPI)
- **Frontend:** React, Next.js (App Router, Server Actions), Redux Toolkit, TanStack Query, Tailwind, Vue / Nuxt, Telegram Mini Apps
- **Web3:** TON (TonConnect, blueprint, jettons, NFT), Solana (Anchor, web3.js), EVM (ethers, wagmi, Uniswap SDK, Permit2, Solidity)
- **AI / LLM:** OpenAI, Anthropic, Gemini API; structured outputs, streaming, prompt pipelines, token cost tracking; Cursor, Claude Code, Codex, MCP
- **Infrastructure and quality:** Docker, Kubernetes, GitHub Actions, GitLab CI, DigitalOcean, nginx, OpenTelemetry, New Relic, Sentry, Jest, Vitest

Education and Languages

Sergiyev Posad Humanitarian Institute, 2018–2020, Secondary Specialized Degree in Law

Russian — Native · English — B1 (documentation, written communication, issue trackers)
